➤ Education

Tunku Abdul Rahman University of Management and Technology

Data Science career, in progress.

CGPA: 3.77

Dean's List: 2 semesters

Actively engaged in various activities and competition such as DevMatch Hackathon, Bursa Young Investor Club (BYIC)

➤ Working experience

YonYou Malaysia Sdn Bhd

It is an ERP company that sells its own ERP system and provides customization services. Intern as an implementation consultant.

- Customer Service (Provide after-sales service to clients. Example, provide solution based on what problem faced while using our product.)
- Summarize meeting minutes (Conclude the requirement gathered from clients.)

➤ Final Year Project

Agentic MLOps for Explainable Credit Risk

Developed a full-stack MLOps pipeline for **Credit Risk Prediction** using **XGBoost**. The solution features a professional React frontend for input collection and result display, which communicates with a **FastAPI** service for real-time inference. The system incorporates real-time **SHAP** value calculation and integrates with the **Gemini API** to generate plain-language explanations and remediation suggestions for loan applicants. Implemented an automated ModelOps framework in Python that includes data drift monitoring, automated model retraining, versioning, and the generation of structured **Model Cards** for governance and auditability.
